

self tapping snap screws

**NOTE: Install snaps  
on corners first.**

### **Mooring Cover Installation**

1. Put mooring cover over boat [make sure the front and back of the cover is on the appropriate ends].
2. Install a self-tapping snap screw onto front corner first, using a screwdriver or electric screwdriver, making sure that cover is still in place. Do the same for the 3 remaining corners.
3. Snap cover onto the 4 corner snaps.
4. Using chalk, lightly mark the rail where the other snaps should go.
5. Install remaining snap screws on the rail.

### **Mooring Cover Maintenance**

We recommend that the cover be washed if necessary with a mild soap and water, using a soft-bristle brush if necessary. Applying a UV inhibitor product for vinyl every year will lengthen the life of your cover.
