

Telescoping Ladder Installation (4400 Only)

NOTE: If installing grab handles with ladder, install grab handles first. (See grab handle instructions)

Tools needed:

- 1: Drill
- 2: 1/4" Drill
- 3: 7/16" Wrench
- 4: #3 Phillips screw driver

1. Place ladder on deck and position the ladder 4 1/2" from the seam to the edge of the ladder. The ladder has a lip for the ladder legs to rest on. Push those tight to the deck. The ladder feet should remain flat with the deck.
2. While keeping the ladder in place unfold the ladder (do not extend) so you have access to the holes. Using the drill and 1/4" drill bit drill one hole (order doesn't matter) and insert a bolt in it so that the ladder will not move.
3. Drill a hole on the other foot of the ladder and insert a bolt.
4. Drill last two holes and insert last two bolts.
5. From the bottom, apply washers and nuts. Tighten them down using a 7/16" wrench and a #3 Phillips screwdriver on the top.
