

Swim Raft Mooring Cover Instructions

You will need a cordless/electric screwdriver with a #2 Phillips head bit and some chalk.
You may need to remove the ladder unless you have a cover that accommodates the ladder.

Note: Do not over-tighten screws!

1. Unfold the cover and position it over the swim raft. There is a "Paddle King" label that should go on a 7-foot side of the raft. This side will be considered the front of the swim raft.
2. Using your screw gun and #2 Phillips bit, install the snap-screws on the front corners first, then install the snap-screws in the rear corners.
3. Snap the cover onto the four corner snaps.
4. Using chalk, lightly mark the spots where the other snaps would go.
5. Install remaining snap-screws.
6. When removing the cover, unsnap each snap—don't yank a whole row off with one pull—this could loosen the snaps or tear them off completely.

Mooring Cover Maintenance

The cover should be cleaned once a year using a mild soap and water with a soft-bristle brush. Allow the cover to dry completely and apply a UV inhibitor product for vinyl such as 303 Aerospace Protectant. 303 also makes a good cleaner as well. Apply petroleum jelly or WD-40 on the swim raft snaps to keep them working well.

Please feel free to contact us at Paddle King if you have any questions.
