

How to Oil the Drive Chain

Instructions:

1. Spray WD-40 or white lithium grease directly on the drive chain of the paddle boat.
2. Pedal the paddle boat for a few cycles.
3. Apply more applicant to get the entire chain.
4. Pedal the paddle boat again to work in the oil/grease.
5. Clean up any spills or drips that may have gotten on the paddle boat during maintenance.

*** The drive chain has been coated to prevent rust. It is likely that the chain will rust in time, but with some chain oil it will perform for many years. Preform drive chain maintenance before and after every boating season or as needed.
